

REMARKS

This paper presents an amendment to the specification of the present application to correct a typographical error. In particular, during duplication of the present application, the text of pages 46 and 47 were inadvertently switched, such that the text that should have appeared on page 47 was found instead on page 46, and *vice versa*. Applicant kindly thanks the Examiner of this application for bringing this error to Applicant's attention.

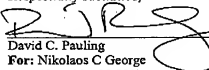

To correct this error in the manner suggested by the Examiner, Applicant respectfully requests that the specification be amended under 37 C.F.R. § 1.312 as set forth in the amendment above, which replaces the text on pages 46 and 47 with the proper text. No new matter is added by the amendment as all of the text was present in the application as filed, albeit in reverse order. Therefore, the amendment to the specification is fully supported by the application as filed.

Applicant wishes to emphasize for the record that this amendment is purely formal and is not believed to affect the substance of the specification, application, or claims in any manner.

Finally, Applicant hereby respectfully requests that the Examiner effect the same change to the specification as the amendment set forth above if for any reason this amendment made pursuant to 37 C.F.R. § 1.312 is not entered. Correction of this anomaly now, prior to issuance of a patent from this application, would save time and expense on the part of both the Patent Office and Applicant.

Date: November 10, 2004

Respectfully submitted,

David C. Pauling
